Domestic Tourism Assam

REPORT BASED ON NSS 72nd ROUND

(JULY 2014 – JUNE 2015)

Central and State Sample Pooled Data

**SURVEY DIVISION
DIRECTORATE OF ECONOMICS AND STATISTICS
GOVERNMENT OF ASSAM**

Report on
“DOMESTIC TOURISM EXPENDITURE”
(DISTRICT-LEVEL RESULTS)

Based on State and Central sample Pooled data of NSS 72nd Round
July 2014 – June 2015

Survey Division
Directorate of Economics and Statistics,
Government of Assam

PREFACE

Report on Pooling of Central and State sample data of NSS 72nd round is the first publication on NSS Survey of the Directorate of Economics & Statistics, Government of Assam.

The state sample data alone cannot be used directly to produce reliable estimates at the micro level due to small sample size of state data therefore, there is an urge to develop a mechanism to increase the sample size pooling both the state and central data for having a better estimate at lower sub state level, particularly at district level. The present report is prepared on the basis of pooled data of NSS 72nd round survey on Domestic Tourism in Assam which gives information on domestic tourism in terms of tourism activities, number of overnight and same day trips with main purposes as for tourism in rural and urban areas and their expenditure patterns.

I take this opportunity to record the work done by the field staff, the DES monitoring staff, who worked hard to make the survey a success. The co-operation extended by the sample households is acknowledged. This Directorate is also thankful to NSO for the technical guidance and material assistance provided by them.

I hope this report will be useful for planners, policy makers, academicians and researchers. Suggestions to improve the content of the report are very welcome.

Ajit Baruah

Table 27.1 (Z) – Table 27.5 (Z)	Average expenditure (in Rs.) per same-day trips and their RSE completed during last 30 days for each leading purpose for each district for central, state and pooled sample (All)	125 - 129

CHAPTER ONE

Introduction

Domestic tourism has made significant contribution to the state economy of Assam by providing an increase employment opportunities and infrastructure development. It is considered to be an economic bonanza due to its multiplier effect as it is a multi-segment industry. The economic benefits that flow into the economy through growth of domestic tourism in shape of increased national and state revenues, business receipts, employment, wages and salary income, buoyancy in central, state and local tax receipts can contribute towards overall socio-economic improvement and accelerated growth in the economy.

1.1 Background & Perspective

In its 72nd round survey, conducted during 1st July'2014 to 30th June'2015(in this report this period is referred to as 2014-15) under technical guidance of NSSO, Directorate of Economics and Statistics, Assam has carried out a survey on "Domestic Tourism". The last survey on this subject was conducted during 65th round of NSS (July 2008-June 2009), referred to as 2008-09. This report presents estimates of various characteristics pertaining to domestic tourism at state level of Assam in 2014-15, based on the results of NSS 72nd round survey.

1.2 Objective of Survey

1.2.1 In addition to explore the role of tourism industry in social and economic development, the purpose of the survey was to obtain appropriate rates/ratios/tables for the use of ministry of Tourism in preparing the Tourism Satellite Account(TSA); 3rd in the series. As per the requirement of TSA, focus of the survey was on capturing details of domestic overnight trips. Information on household characteristics, which are the important determinants of tourism characteristics, such as household size, principal industry, principal occupation, household type, religion, social group, household consumption expenditure, particulars of overnight trips completed during the reference period and expenditure incurred by the household on domestic tourism were captured. However some information on same-day trips and special same day trip were also captured. The indicators presented in this document are primarily on:

- a. Households reporting overnight trips
- b. Trips and visitor-trip characteristics of overnight trip.
- c. Trips characteristics of same-day trip
- d. Tourism expenditure for both overnight and same-day trip

1.2.2 These indicators on domestic tourism are required for planning, policy formulation and decision making at various levels within the government and outside. The results of the survey are likely to be used by the Ministry of tourism etc. apart from private data users, policy makers and other stakeholders.

1.3 Geographical coverage: The survey covered the whole of the Union of India.

1.4 Population coverage:

The following rules were adhered to determine population coverage:

1. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes etc., were excluded, but residential staff therein was listed while listing was done in such institutions. The persons of the first category were considered as members of their parent households and were counted there, convicted prisoners undergoing sentence were outside the coverage of the survey.
2. Floating population, i.e., persons without any normal residence were not listed. But households residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place, were listed.

3. Neither the foreign nationals nor their domestic servants were listed, if by definition the latter belonged to the foreign national's households. If, however, a foreign national became an Indian citizen for all practical purposes, he or she was covered.
4. Persons residing in barracks of military and paramilitary forces (like police, BSF, etc.) were kept outside the survey coverage due to difficulty in conduct of survey therein.
However, civilian population residing in their neighbourhood, including the family quarters of service personnel, were covered.
5. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, persons staying in old age homes, ashrams/hostels and the residential staff (other than monks/nuns) of these ashrams were listed. For orphanages, although orphans were not listed, the persons looking after them and staying there were considered for listing.

1.5 Sampling design

- 1.5.1 A stratified multi-stage design was adopted for the 72nd round survey. The first stage units (FSU) were the census villages in the rural areas and Urban Frame Survey (UFS) blocks in the urban areas. The ultimate stage units (USU) were households in both rural and urban areas. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups (hgs)/sub-blocks (sbs) from each rural/urban FSU.
- 1.5.2 **Selection of first-stage units:** A total of 335 villages were surveyed in rural Assam and the number of urban blocks surveyed was 132 as first stage units (FSUs) in NSS72nd round for the state sample at all Assam level, selected by Probability Proportional to Size Without Replacement (PPSWOR) sampling method. The results presented in this report are solely based on the state sample.
- 1.5.3 **Selection of second-stage units:** Stratification of the households was done on the basis of households having at least one member who performed overnight trip during last 365 days for medical/holidaying/shopping purpose or from the remaining, households having at least one member who performed any other overnight trip during last 30 days. For this particular survey, 10 households were selected using Simple Random Sampling without Replacements (SRSWOR) from each sample village/block. The total number of households in which schedule 21.1 was canvassed, was 3530 and 1320 in rural and urban Assam respectively.
- 1.5.4 **Sub-rounds:** The survey period of this round was divided into four sub-rounds of three months' duration each as follows:
 - Sub-round 1: July-September 2014
 - Sub-round 2: October-December 2014
 - Sub-round 3: January-March 2015
 - Sub-round 4: April-June 2015
- 1.6 **Main features of the Survey:** Data were collected on household characteristics such as household size, principal industry, principal occupation, household type, religion, social group, household's usual monthly consumer expenditure and demographic particulars such as name, age, gender, marital status, educational level, usual principal activity status.
- 1.7.1 Particulars of overnight trips completed by household members during (a) last 365 days for health & medical; holidaying, leisure & recreation and shopping and (b) last 30 days for business, social, pilgrimage & religious activities, education & training and others were collected.

- 1.7.2** Particulars of overnight trips completed during last 365 days were collected only from those households which performed a trip with any of the leading purposes namely health & medical, holidaying, leisure & recreation and shopping. Similarly particulars of overnight trips completed during last 30 days were collected only from those households which performed a trip with any of the leading purposes namely business, social, pilgrimage & religious activities, education & training and others (this doesn't include health & medical, holidaying, leisure & recreation and shopping).
- 1.7.3** Data on particulars of expenditure (Rs.) for all trips completed during last 365 days or 30 days with break-up of expenditure by accommodation, food and drink, transport, shopping, recreation etc. were collected along with information on reimbursement/direct payment by any institution. Particulars and expenditure (Rs.) of same-day trips completed by household members during last 30 days were collected.
- 1.7.4** Information on particulars and expenditure (Rs.) of special domestic trips of duration of more than 180 days but less than or equal to 365 days, completed by household members during last 365 days was collected.

CHAPTER TWO

Concepts and Definitions

2.1 Basic Concepts

2.1.1 Household: A group of person normally living together and taking food from common kitchen constitutes a household. The word “normally” means that temporary visitors are excluded but temporary stay-aways are included. “Living together” is usually given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person’s family members is taken to include that person also. Under- trial prisoners in jail and indoor patients of hospitals, nursing homes, etc. are considered as members of the households to which they last belonged. In this round, however, following exceptions in the definition of household was integrated.

(a) Students residing in students’ hostels were considered as members of the household to which they belonged before moving to the hostel irrespective of the period of absence from the household they belonged. Hence, they were not regarded as forming single-member households unlike previous rounds. (b) Any woman who has undergone childbirth during last 365 days was considered a member of the household which incurred the cost of childbirth irrespective of her place of residence during the last 365 days. (c) A child aged less than one year was considered a member of the household to which its mother belongs.

2.1.2 Household Size: The size of a household is the total number of persons in the household.

2.1.3 Household’s Usual Consumer Expenditure in a month: It is the sum total of monetary values of goods and services usually consumed (out of purchased/home produced or procured otherwise) by the household on domestic account during a month. This has the following components which are given below.

A. Usual expenditure for household purposes in a month.

B. Purchase value of any household durables (mobile phones, TV sets, fridge, fans, cooler, AC, vehicles, computers, furniture, kitchen equipment, etc.) purchased during the last one year and the expenditure per month obtained by dividing by 12.

C. If any household consumption (usually) from (a) wages in kind (b) home-grown stock (c) free collection was there, then the approximate monthly value of the amount usually consumed in a month was imputed. Then the sum of A+B+C is taken as household’s usual consumer expenditure in a month in whole number of rupees. Usual monthly per capita consumer expenditure (UMPCE) for a household is the household’s usual consumer expenditure in a month divided by that household size.

2.1.4 Quintile class of UMPCE:

MPCE quintile distribution, for a part of the population, say, persons undertaken overnight trips or same-day trips for different purposes in a particular State/UT in rural/urban areas, was assumed to be same as the UMPCE distribution of the entire population of that State in rural/urban areas. It is assumed that UMPCE distribution of households is same as the UMPCE distribution of the persons belonging to those households.

2.1.5 Travel:

In general, travel is understood as the movement of persons between different geographic locations specifically different geographical administrative areas (like different villages/towns/cities), for any purpose and any duration. Those who travel are referred to as travelers. Travel can occur within a country (domestic travel) or involve more than one country (international travel), Domestic trip (defined later, separately for overnight and same-day) is a subject to domestic travel.

2.1.6 Usual Place of Residence:

The usual place of residence (UPR) of a person is the place (village/town) where the person has been staying continuously for at least six months immediately prior to the date of survey. Even if a person was not staying in the village/town continuously for six months immediately prior to date of survey but is presently staying there with intention to stay there continuously for six months then that place should be taken as his/her UPR.

2.1.7 Usual Environment:

The usual environment (UE) of an individual refers to the notional geographical space, including his/her UPR, within which he/she moves more or less regularly and frequently (daily/every alternate day or at least once in a week repeatedly/likely to be repeated for more than six months for the same purpose) irrespective of the distance. The usual environment of an individual includes the place of usual residence of the household to which he/she belongs, his/her own place of work or study and any other place that he/she visits more or less regularly and frequently, even when this place is located far away from his/her place of usual residence or in another locality.

Move regularly between their UPR and place of work or study, or more or less regularly and frequently visit places, like homes of friends or relatives, shopping centers, religious places, health care centres or to avail any other facilities, between geographical locations irrespective of their distance.

2.1.8 Domestic Overnight Trip:

A domestic overnight trip is one with a main destination within the country of residence of the visitor. It refers to a movement –for a duration of not less than twelve hours (including 12 midnight to 5 AM) in two consecutive calendar days (i.e. Crossing midnight or 00-00 hours) and of not more than 6 months-by one or more household members outside their usual environment (which includes the usual place of residence (UPR)) and return to the same UPR (a round trip), irrespective of place of stay during this hours. The movement is for any of the following purposes:

- Business
- Holidaying, leisure and recreation
- Social
- Pilgrimage & Religious
- Education & Training
- Health & Medical
- Shopping
- Others

The followings were excluded from the purview of domestic trip:

- i. Any movement for the purposes of migration or getting employed or setting up of residence in that place.
- ii. Movements between UPR and the place of work or study.
- iii. All movements, made more or less regularly and frequently from the UPR and back (daily/every alternate day or at least once in a week) for shopping, visiting family, for religious purpose, health and medical care, education and training, etc. Repeatedly/likely to be repeated for a period of more than six months for the same purpose, was not considered as trips irrespective of the distance travelled.
- iv. All the trips completed during the reference period by former household members who were currently not a member of that selected household at the time of survey.

Trips for persons who were household members at the time of survey but were not household members at the time of actually completing a trip within the reference period were also considered as trips for the selected household.

A trip is uniquely specified its main destination, leading purpose, no. of household members in the trip being together (with variation of up to 3 days). 'Being together' means being in the same town or village for most of the time during the trip and also either starting or ending trip together. They can either start together but end the trip with a variation of up to 3 days or vice versa.

In cases where set of destinations differed slightly from person to person (among household members who undertook the trip they were considered to be on the same trip provided they were together for most of the time in the trip. But if two members of a household spent most of the time away from each other during the period since leaving their residence to returning dates might be the same.

2.1.9 Domestic Overnight Tourism:

It covered overnight trips by household members within the territory of India, either as a domestic trip or as domestic part of an international trip.

2.1.10 Domestic Overnight Visitor:

A domestic overnight visitor is a person (household member), residing in the country, who performed an overnight trip.

2.1.11 Starting month:

The month in which a particular trip was started from UPR was the starting month of that trip. When many members of a household travelled together on a trip but one or more trip member started later than the rest, the earliest starting date of that trip by any household member were considered for determining the starting month.

2.1.12 Purpose & Leading Purpose:

The purpose of a trip of a household member is that purpose but for which he/she would not have undertaken the trip. Whereas the leading purpose of a trip is that purpose without which none of the household members in that trip would have undertaken the trip. Leading purpose of a trip is unique to all the members participating in that trip.

2.1.13 Main Destination:

The main destination of trip is defined as the place, visiting of which central to the decision to undertake the trip. However, if no such place could be identified by the informant, the main destination was taken as the place where the visitors spent most of their time during the trip. If the visitors spent the same amount of time in two or more places during the trip, then the main destination was defined as the one among these places that was the farthest from the usual place of residence of the visitors.

2.1.14 Type of Trip:

A trip could be of two types-package and non-package. The term package trip, to be used in the survey, is given below.

Package Trip:

A package trip consisted of a "tourism product" provided by a tour operator which elaborates it and sells it directly or through travel agencies. Within a package trip, travelers received a combination of products associated with a trip, which were made of more than one of the following tourism services: Transportation services, accommodation services, food serving services, sightseeing services, entertainment services, etc. and other goods and services at will. The components of a package trip might be pre-established or tailor-made, in which case, the visitors chooses a

combination of services he/she wishes to acquire from a pre-established list of such services. If such a package was availed of for the major part of time in a trip, such a trip was considered as a package trip. If the expenditure on more than one chargeable travel services availed for some time during the trip did not cover the whole trip but covered only a minor time of the duration of the trip then such a trip was not considered as package trip although the trip had a package component. A package trip may have a non-package component in addition to package component, e.g., a visitor may avail himself of accommodation and other services in the package through some tour operator but make some special sight-seeing arrangements in some places of visit in the trip on his own.

Similarly, a trip, which is non-package, may also have package component in addition to non-package component.

2.1.15 Mode of Travel:

Mode of travel refers to means of transport used by visitor(s) to travel in a trip. The travel relevant here was the travelling done to cover the distances to the destinations and not joyrides or movement for adventure, as in skiing or boating for pleasure, or walking inside a museum, fort or maze. Visitor(s) might be using one or more means of transport in a trip, such as: on foot, bus, train (railways), ship/boat, air, own transport: motorised (such as, two wheeler, auto rickshaw, car/jeep, tractor/truck etc.), non-motorised (e.g. bicycle, rickshaw, animal driven transport etc.); transport equipment rental (hired transport): motorised (such as, two-wheeler, auto rickshaw, car/jeep, taxi, tractor/truck etc.), non-motorised (e.g. bicycle, rickshaw, animal driven transport etc.).

Major and Minor mode of travel:

The means of transport by which maximum distance was travelled was treated as 'major' or mode of travel for that trip. In case more than one such mode was there [e.g. train, air] for which equal distance was travelled then entry to be recorded for that means which was more expensive. The means of transport by which second maximum distance was travelled will be treated as 'minor' mode of travel for that trip.

2.1.16 Type of stay:

The type of stay refers to the accommodation used for stay by visitor(s) in an overnight trip. Accommodation refers to the space, whether paid or unpaid, where the visitor(s) spent some considerable time for spending night, taking rest, spending some leisure time, refreshing oneself, etc. during the trip. It could be hotel, guest house, dharamshala, rented house, friends & relatives houses, others (carriages/coaches, railway station, ship/boat, waiting rooms, airport lounge etc.).

Major and minor type of stay:

The place where the highest number of nights was spent was treated as 'major' type of stay. In case more than one such place was there (e.g. hotel, dharamshala) where same no. of nights was spent then information was captured for that type of stay which was more expensive. The place where second highest number of nights was spent will be treated as 'minor' type of stay.

2.1.17 No. of nights spent outside usual place of residence (including journey):

The number of nights spent by the visitors outside his/her usual place of residence from starting of the trip to the completion of the trip, including the nights spent in transit.

2.1.18 Tourism Expenditure:

For the purpose of this survey tourism expenditure included expenditure made not just during the trip but also the expenditure related to the trip even if made before or after the trip. It included all expenses related to the trip paid or payable by the household. It also included expenditure related to the trip, whether directly paid or reimbursed, by some institution like Government or other agencies on behalf of the selected household. All expenditure in connection with the trip except those used for productive purposes/enterprises was included. All the expenditure incurred relating to the trip performed by the member (s) of the sample household during the reference period was included irrespective

of the source of expenditure, i.e. whether the expenditure had been incurred by the sample household or not. The payment might be made through case, cheque, credit card, debit card, in instalments, etc. The total expenditure in all such cases irrespective of mode of payment was recorded. The components of tourism expenditure were classified as under:

- a) Package component
- b) Non-package component, which were further sub-divided as below
 - i. Accommodation
 - ii. Food and drink
 - iii. Transport
 - iv. Recreation, religious, cultural, sporting and health related activities
 - v. Shopping
 - vi. Others

2.1.18.1 Tourism expenditure includes:

- Monetary expenditure on goods and services paid or payable by the visitor out of his/her own pocket or reimbursed by some institution like Government or other agencies/individuals or expenses of the visitor directly paid by such institutions/individuals:
- Expenditure incurred on items of high unit values like cars, computers, etc. related to a trip if those were used for consumption purpose and not for productive purpose.

2.1.18.2 Tourism expenditure excludes:

- The payment of taxes and duties not levied on products(goods and services):
- The purchase of financial and non-financial assets, including land, real estate but excluding high unit values like cars, computers, etc. if those are used for consumption purposes:
- All transfers of cash or used goods such as donations to charities or to members of other households as these do not correspond to the purchase of consumption goods or services from these charities or individuals. Alms, bribes, cash tips, cash gifts etc. were also excluded:
- The payment of all classes of interest, including those on expenditures made during and for trips.

2.1.19 Domestic Same-day Trip:

A domestic same-day trip is one that does not involve an overnight stay (i.e. duration of more than 12 hours and including 12 midnight to 5 A.M.) but fulfil other conditions of overnight trips, irrespective of the number of hours spent on the trip. Same day trip can be either completed on a same calendar date or spread over two consecutive calendar dates with a main destination within the country of residence of the visitor, for any of the following purpose:

- Business
- Holidaying, leisure & Recreation
- Social
- Pilgrimage & Religious
- Education & Training
- Health & Medical
- Shopping
- Others

Like in overnight trips, all movements of persons, whose nature of work/job was regular touring outside their UPR to different places, like, mobile hawkers, on-board staff of airlines/ship/railways or of buses or of hired taxis and other

public transports etc. was not considered as trips(overnight or same-day). However movements of medical representatives, sales executives, field investigators, who have to travel to different places, other than their main place of work from where they report to their controlling officer/get salary etc. in relation to their official work/business, were considered as trips.

2.1.20 Domestic Same-day Visitor:

A domestic same-day visitor was a person (household member), residing in the country, who performed a same-day trip.

CHAPTER THREE

Estimation Procedure

3.1 Estimation Procedure

3.1.1 Notations:

- s = subscript for s-th stratum
t = subscript for t-th sub-stratum
m = subscript for sub-sample (m =1,2)
i = subscript for i-th FSU [village (panchayat ward)/block]
d =subscript for a hamlet-group/ sub-block (d=1, 2)
j = subscript for j-th second stage stratum in an FSU/hg/sb
k = subscript for k-th sample household under a particular second stage stratum within an FSU/hg/sb
D = total number of hg's/ sb's formed in the sample FSU
D* =0 if D=1
= (D- 1) for FSUs with D>1
Z = total size of a rural/urban sub-stratum (= sum of sizes of all villages/blocks of a sub-stratum)
z = size of sample village/UFS block used for selection.
n = number of sample FSUs surveyed including 'uninhabited' and 'zero cases' but excluding casualty for a particular sub-sample and sub-stratum.
H =total number of households listed in a second-stage stratum of an FSU/hamlet-group or sub-block of sample FSU
h =number of households surveyed in a second-stage stratum of an FSU/hamlet-group or sub-block of sample FSU
x , y = observed value of characteristics x, y under estimation
 $\hat{X}, \hat{Y}$ = estimate of population total X ,Y for the characteristics x, y Under the above symbols,
 $y_{stmidjk}$ = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/ sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum.
However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

3.2 Formulae for Estimation of Aggregates for a particular sub-sample and stratum $\times$ sub-stratum:

3.2.1 Schedule21.1

3.2.1.1 Rural/Urban:

- (i) For j-th second-stage stratum of a stratum $\times$ sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

3.2.2 Over all Estimate for Aggregates for a sub-stratum:

Over all estimate for aggregates for a sub-stratum ($\hat{Y}_{st}$) based on two sub-samples in a sub-stratum is obtained as:

$$\hat{Y}_{st} = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{stm}$$

3.2.3 Over all Estimate for Aggregates for a stratum:

Overall estimate for a stratum ($\hat{Y}_s$) will be obtained as

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

3.3 Over all Estimate of Aggregates at State level:

The overall estimate $\hat{Y}$ at the State level is obtained by summing the stratum estimates $\hat{Y}_s$ over all strata belonging to the State.

3.4 Estimates of Ratios:

Let $\hat{Y}$ and $\hat{X}$ be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State level.

Then the combined ratio estimate ($\hat{R}$) of the ratio ($R = \frac{Y}{X}$) will be obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

3.5 Estimates of Error: The estimated variances of the above estimates will be as follows:

3.5.1 For aggregate $\hat{Y}$:

$$Var(\hat{Y}) = \sum Var(\hat{Y}_s) = \sum \sum V$$

Where $Var(\hat{Y}_{st})$ is given by

$$Var(\hat{Y}_{st}) = \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2,$$

where $\hat{Y}_{st1}$ and $\hat{Y}_{st2}$ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum's' and sub-stratum 't'.

3.5.2 For ratio $\hat{R}$:

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_f \left[\left(\hat{Y}_{st1} - \hat{Y}_{st2} \right)^2 + \hat{R}^2 \left(\hat{X}_{st1} - \hat{X}_{st2} \right)^2 - 2\hat{R} \left(\hat{Y}_{st1} - \hat{Y}_{st2} \right) \left(\hat{X}_{st1} - \hat{X}_{st2} \right) \right]$$

3.5.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

3.6 Multipliers:

The formulae for multipliers at stratum / sub-stratum / second-stage stratum level for a sub-sample for schedule 21.1 are given below:

Sch. type	Sector	Formula for multipliers	
		hg/sb 1	hg/sb 2
0.0	Rural / urban	$\frac{Z_{st}}{n_{stm}} \times \frac{1}{Z_{stmi}}$	$\frac{Z_{st}}{n_{stm}} \times \frac{1}{Z_{stmi}} \times D_{stmi}$
21.1	Rural / urban	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{Z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{Z_{stmi}} \times D_{stmi} \times \frac{H_{stmi1j}}{h_{stmi1j}}$
		j=1, 2,3,4,5 for Sch. 21.1 j=1,2,3 for Sch 1.5 j= 1,2 for Sch. 1.60	

Note:

- For estimating any characteristic for any domain not specifically considered in sample design, indicator variable may be used.
- Multipliers have to be computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.

CHAPTER FOUR

Pooling and Poolability test

Sample size of Assam:

The sample size of central and state sample for Assam is given below in Table 4.1

Table 4.1: Sample size of Central and State samples

Sector	Central Sample		State Sample	
	FSU surveyed	Household surveyed	FSU surveyed	Household surveyed
Rural	335	3346	335	3530
Urban	132	1299	132	1320
Rural+Urban	467	4645	467	4850

Note:* The total number of state sample (FSUs) is 468. But a rural sample village FSU (34642) out of purview of survey of schedule 21.1 as it is declared as aerodate village in Morigaon district treated as zero case. There is no urban sample in the district Baksa (dist. Code-25).

Wald-Wolfowitz run test for average expenditure:

Suppose X and Y are independent random samples with cumulative distribution function (CDF) as $F_s(x)$ (for state sample) and $F_c(y)$ (for central sample). Null Hypothesis to be tested is $H_0: F_s(x) = F_c(x)$ for all x against alternative Hypothesis is $H_1: F_s(x) \leq F_c(x)$ for all x and $F_s(x) < F_c(x)$ for some x.

The Wald-Wolfowitz run test with 1% level of significance is performed here for all districts to understand whether the distribution of average expenditure for performing the trips is same or not. The test result is presented in the following table.

Table 4.1.1: District wise result of run test of average total expenditure for all overnight trips during last 365 days

District Code	District Name	The null hypotheses are rejected if the calculated z value is less than the table value (-2.33)			
		Rural	Test Result	Urban	Test Result
1	Kokrajhar	-3.2483	Rejected	-2.7003	Rejected
2	Dhubri	-0.5932	Accepted	-1.8418	Accepted

7	Sonitpur	-0.7351	Accepted	1.0078	Accepted
8	Lakhimpur	-2.6728	Rejected	-1.884	Accepted
9	Dhemaji	-1.7149	Accepted	0.6246	Accepted
10	Tinsukia	-3.0474	Rejected	-3.056	Rejected
11	Dibrugarh	-2.2565	Accepted	-0.4184	Accepted
12	Sivasagar	-3.0799	Rejected	-0.8074	Accepted
13	Jorhat	-1.7291	Accepted	-0.3894	Accepted
14	Golaghat	-0.0757	Accepted	-0.1132	Accepted
15	Karbi Anglong	-2.3157	Accepted	-1.1342	Accepted
16	Dima Hasao	-3.9534	Rejected	-4.6722	Rejected
17	Cachar	-1.0162	Accepted	-0.5878	Accepted
18	Karimganj	-4.9969	Rejected	-3.2892	Rejected
19	Hailakandi	-1.4825	Accepted	-0.3594	Accepted
20	Bongaigaon	-2.4468	Rejected	1.1866	Accepted
21	Chirang	-3.7052	Rejected	-0.1717	Accepted
22	Kamrup	-1.9718	Accepted	-1.4145	Accepted
23	Kamrup Metropolitan	-0.3594	Accepted	0.8348	Accepted
24	Nalbari	-3.4067	Rejected	-0.3483	Accepted
25	Baksa	-1.8806	Accepted	-	-
26	Darrang	-4.0968	Rejected	-1.2742	Accepted
27	Udalguri	-2.2348	Accepted	-0.9515	Accepted

The above table shows that run test at 1% level of significance the null hypothesis is accepted for 14 districts in Rural Sector and 20 districts in Urban Sector for average expenditure for all overnight trips during last 365 days respectively.

Chi-square Test for Number of trips:

It tests the null hypothesis that the medians of the populations from which two samples are drawn, are identical.

A Chi-Square test with 1% level of significance is performed here for all districts to understand whether the distribution of number of overnight trips is same or not. The test result is presented in the following table.

Table 4.1.2: District wise result of Chi-square test of mode of travel, type of stay, leading purpose and main destination of trips during last 365 days

District Code	District Name	The null hypotheses are rejected if the calculated Chi-square value is greater than the table value(5.75)

Graphical Representation:

Fig-2

While considering the number of overnight trips in rural and urban separately or all sector, we can infer that during last 30 days maximum number of trips were performed on leading purpose social.

District wise analysis of estimated number of overnight trips for all leading purposes:

Case1: During last 365 days

Fig-3

From the above figure it is clear that among all rural districts in Assam, Nagaon has performed maximum number of overnight trips during last 365 days for all leading purpose while Kamrup Metropolitan being the least.

Fig-4

From the above figure it is clear that among all Urban districts in Assam, Kamrup Metropolitan has performed maximum number of overnight trips during last 365 days for all leading purpose while Darrang being the least.

Case 2: During last 30 days

Fig-5

From the above figure it is clear that among all rural districts in Assam, Cachar has performed maximum number of overnight trips during last 30 days for all leading purpose while Kamrup Metropolitan being the least.

Fig-6

From the above figure it is clear that among all Urban districts in Assam, Kamrup Metropolitan has performed maximum number of overnight trips during last 30 days for all leading purpose while Chirang being the least.

District wise analysis of average expenditure per overnight trip completed for leading purposes:

Case 1: During last 365 days

Table summary:

Estimated average expenditure (in Rs.) per overnight trip completed during last 30 days				
Average expenditure for leading purpose of trip ↓	Sector→	Rural	Urban	All
Business		7095	5756	6883
Social		1840	3462	2043
Religious & pilgrimage		5931	14695	7451
Education & training		5709	13781	6985
Others		5676	8280	5939

Graphical Representation:

Fig-8

While considering the average expenditure per overnight trips in rural/urban/all sector we can infer that during last 30 days maximum expenditure occurred due to leading purpose religious and pilgrimage.

District wise analysis of average expenditure (in Rs.) per overnight trips for all leading purposes:

Case 1: During last 365 days

Fig-9

Fig-10

From the above figure we can see that during last 365 days the average expenditure per overnight trips for all leading purpose is maximum in Cachar district for rural sector and for urban sector, average expenditure is maximum in Kamrup Metropolitan.

Case 2: During last 30 days

Fig-11

Fig-12

From the above figure we can see that during last 30 days the average expenditure per overnight trips for all leading purpose is maximum in Karimganj district for both rural and urban sector.

Parametric test for poolability (equality of mean test)

The Equality of average expenditure by leading purpose (holidaying, health, shopping) and average all trips expenditure during the last 365 days based on central and state sample was tested using Z-statistic at 1 % level of significance ($Z_{0.005} = 2.575$) for all the 27 districts of the state of Assam(based on 2011 Population Census) under the assumption of normality. The results are summarized for HOLIDAYING, HEALTH, SHOPPING and EXPENDITURE for all leading purposes in Table- S1 for rural and urban sector respectively.

It was observed that 7 (26 %), 9(33 %), 14(52 %) 9(33 %) out of 27 districts of the state failed the mean test for HOLIDAYING, HEALTH, SHOPPING and ALL TRIPS EXPENDITURE respectively in rural sector. Corresponding results for urban sector was 7 (26 %), 6 (22 %), 22(82 %) and 5(19 %) respectively out of 27 districts of the state. With reference to all trips expenditure, there was more rejection through non-parametric run test (Table- 4.1.1) than the parametric mean test (Table- 4.1.3) due to divergence between the estimates of central and state sample.

Table-S1: No. of Districts for which Poolability was rejected by mean difference test using Z-statistic (two sided) at 1 % level of significance ($Z_{0.005} = 2.575$)				
Number of districts failed the mean test				
Sector	Holiday	Health & medical	Shopping	All
Rural	7	9	14	9
Urban	7	6	22	5

Divergence between estimates of central sample and state sample

Percentage divergence between central and state sample expenditure is worked out as absolute percentage difference of the trip expenditure w.r.t. central sample expenditure. Distribution of districts by percentage range of divergence of difference of expenditure (holiday, health, shopping) and average all trips expenditure during the last 365 days of central and state sample in respect of the 27 districts of Assam is summarized in Table- S2 for rural and urban sector.

Table- S2: Distribution of districts by range of % divergence of trip expenditure on (holiday, health, shopping) and all trips expenditure of central and state sample									
Sector →		Rural				Urban			
Percentage divergence ↓	Purpose of trip→	Holidaying, leisure and recreation	Health & medical	Shopping	All trips expenditure	Holidaying, leisure and recreation	Health & medical	Shopping	All trips expenditure
≤ 50%		8	6	6	9	6	14	2	15
> 50% & ≤ 100%		13	11	1	9	12	9	2	6
> 100 %		6	10	12	9	3	2	5	5

Remark:

$$\text{Percentage divergence} = \left| \frac{(\text{Central sample} - \text{State sample})}{\text{Central sample}} * 100 \right|$$

CHAPTER SIX
